WC Series

Ultrabake™ Washer Caps

Purpose

Ultrabake™ Washer Caps are designed to mask plain or threaded holes and studs; they will mask off the hole or stud and leave a circular grounding or earthing area around it.

How the product is used

The cap is applied by being pushed over the stud until the grounding diameter is tight against the face of the area to be masked. The cap is removed by being pulled off. It can be used as a plug by being pushed into the hole. For a hole in sheet metal the cap can be pulled into the hole. However, on holes we would recommend a plug such as the UW series of washer plugs or the UWPP series of washer pull plugs. If the cap is used as a plug it can be pushed into place using a rounded end rod or dowel.

Recommended for

Powder coating, E-coating, Plating, Anodizing, Spray painting

Temperature range

Maximum temperature 600°F (315°C)

Storage conditions

Items should be stored in dry conditions at an ambient temperature of between 55°F (13°C) and 85°F (30°C). It is important to rotate stock and use the product in the order that it is received.

Design features

- **Dual Purpose** - The cap can cover studs or plug holes
- **Sizes** - This series offers sizes specifically designed for metric threaded studs
- **Labor saving** - The washer design eliminates the need for two-stage masking
- **Flexible** - The cap is flexible so it can fit a range of different diameters
- **Reusable** - The caps are reusable depending on the application
- **Color coded** - The caps are color coded to ease identification and sorting
- **Identification** - The Shercon name is on the product

Custom sizes and colors

Custom sizes are available of this design. Custom colors are available; however, they are subject to a minimum order quantity.
